FOR IMMEDIATE RELEASE

### **Air King Take the Lead in Energy Efficiency with the DL4 Series Exhaust Fans with LED Light**

West Chester, PA – August, 2016 – Air King, a leading manufacturer of ventilation products, announced the addition of the DL4 series exhaust fans with LED lighting to its line of ventilation and indoor air quality products.

The DL4 series provides the perfect solution for residential ventilation where an energy efficient lighting solution is also required. The DL4 series features a DC motor that maintains the airflow (CFM) ratings across multiple static pressures while the included 8 watt LED lamp provides cost effective, long term lighting. Air King president, Jeff Kenkelen says, “Airflow has become a big deal these days and is being tested on a regular basis in the field. The self adjusting motor of the DL4 series gives builders and installers the piece of mind that the required airflow needed will be met.”

The DL4 series is recognized as the Most Efficient of ENERGY STAR® 2016. The Most Efficient category of ENERGY STAR recognizes products that achieve the highest levels of energy efficiency in their respected categories. Ventilation fans must meet strict criteria for the ratio of airflow (CFM) to energy usage (Watts). In addition to meeting the criteria, the DL4 series currently has the highest CFM/Watt ratio (most efficient) on the market today exceeding the next closest fan by over 24%\*.

The Air King DL4 series can be used to meet local and national codes for indoor air quality including ASHRAE 62.2, CalGREEN, LEED for Homes and more. Each model provides up to 120 CFM of ventilation power with a self-adjusting DC motor that maintains the airflow across multiple static pressures while operating at almost silent sound levels. Models with automated motion and/or humidity sensors are available.

#### **Key features of the DL4 series include:**

- Included LED lamp.
- Ability to dial in the desired airflow from 40 to 120 CFM.
- DC motor maintains CFM ratings across multiple static pressures.
- Nearly silent operation, homeowner may not even know it is operating.
- 6" round duct connector with gasketed damper protects against backdrafts and seals the duct better than any other damper on the market today.
